

HG002 Deterministic Evidence Lineage

Sankey widths use sqrt-normalized scaling for refinement-pressure readability.

Generated deterministically from sidecar F3A v2 telemetry substrate. Evidence lineage only; not clinical interpretation.

Semantic caveats: annotation_enables_interpretability; rare_interpretable_evidence_includes_coding_and_regulatory_transcript_rare; prioritization_not_diagnosis; validation_ready_not_clinically_validated. Validation-ready does not mean clinically validated.
