

HG002 Semantic Evidence Branching

VAP preserves coding and noncoding semantic evidence classes rather than reducing interpretation to a single filter funnel.

Rare interpretable evidence

Total: 113.4k

Common / low-support evidence

Total: 3.37M

Uninterpretable evidence

Total: 1.15M

Bar lengths use sqrt scaling; labels report raw telemetry counts from the F3B sidecar substrate.
Semantic branches are observational evidence classes, not diagnoses, causal claims, or validation outcomes.
Generated deterministically from metrics/figure_f3b_semantic_branching.tsv.
